

Hello Travis,

Remaining of previous changes you mentioned before second phase : \$290 (Almost finished, took us one week)

Changes mentioned in the earlier doc: \$720 (It will take almost one and half week)

Admin Backup : \$180 (Two working days)

Mailing System : \$320 (3 and half working days)

Data Anaylsis :\$1750 and 4 weeks

In data anaylsis following points will be done

- Graphical Analysis of same tasks done by different employees.
- Comparision of two employees.
- Employee analysis which will include if he is doing his tasks on time, in which task he is lagging, his tasks completed in last 60 days in graphical form and which task is best for him.
- Department's productivity (which department has completed his tasks on time, departments comparision on the basis of tasks completed in a specific time span)
- Employees will have their own anaylsis, tasks completed by them in last sixty days. If the deadline is approaching they will have notification on the homepage and email. Which tasks they are good at and on which tasks they need to work on.

Pricing

As we proceed towards the production (completion), pricing for changes will increase because we have to revert previous work and redo it accordingly and have to create new boundary cases and test cases to test the system accordingly. Aformentioned are the pricing for all the changes. However you can give a counter offer or we can proceed.

Preferences

You can set preferences of the tasks. In my technical opnion we should complete the changes than we do data anaylsis and than we can think about mobile applications.

Data Anaylsis

As far we data anaylsis is concerned, we have qualified data scientist, we can do different types of anaylsis. Data analysis is an important factor these days to increase profits and productivities in the

companies. And with aforementioned analysis, it can help the companies to navigate their resources in productive way.
